

Subject Index

A

- Abelian (*see* group)
- Alexandroff dimension, 444–448
- Alexandroff duplicate, 112, 115
- Alexandroff space, 444–446, 450, 451
- Alexandroff topology, 49–53, 55, 56, 59, 62, 64, 67, 301, 348, 415
- Alexandroff-Urysohn, 211, 212
- almost-periodic, 316, 319, 321, 323, 324, 327–329
 - point, 317–319, 326
- asymmetric, 382–390
- axiom of choice 201

B

- Baire, 170
 - c^+ -, 46, 47, 48
 - category theorem, 45, 457, 458
 - distance, 13
 - metric, 20, 75, 79
 - partial metric, 351
 - quasi-pseudo-metric, 351, 354, 356
 - space, 45, 169, 171, 172
 - distance, 13
 - κ -, 46
- Banach fixed-point theorem, 11, 12, 18, 20, 21–26, 69, 156, 255
- Banach space, 117
- bi-dual lattice, 333
- bi-neighborhood lattice, 333
- bisimulation, 238–241
- bitopological space, 265, 266, 268–274, 304, 307, 333, 334
- bitopology, 304, 307
- Bohr compactification, 457, 459–461, 463
- Bohr topology, 164–167
- Boolean, 1, 2, 202, 205, 214, 215, 338
- Borel set, 174

C

- C^* -algebra, 88–97, 100–104
- cancellative, 130–138
- cardinality, 123, 124, 318
- Cartesian, 304, 312
 - closed category, 393, 398

- product, 28, 33, 71, 143, 151, 372
- Cauchy filter, 166, 167, 232, 233
 - D -, 235
 - K -, 235
 - minimal, 251
 - net, 165
 - pair of (ultra)filters, 234
 - pair of filters, 235
 - sequence, 56–66
- Cech-Stone compactification, 130, 317
- closure space, 393, 402, 403
- coherent space, 214–216, 219–227
- Collins-Roscoe mechanism, 433
- compact, 13, 20, 91, 106, 108, 109, 113–115, 117–119, 201, 215, 224, 233, 235, 258, 259, 310–312, 314, 316, 318–320, 329–331, 339, 342, 457, 458, 460, 463
 - countably, 111, 118
 - locally, 117, 216
 - minimal set, 319
 - open set, 224
 - saturated set, 215–217, 220–223, 227, 229
 - set, 310
 - weakly, 251, 258
- compact boundary-metrizable nonmetrizable space, 111
- compact cardinal, weakly, 251
- compact Hausdorff space, 227, 321, 342, 458
- compact Hausdorff topology, 425
- compact monotonically normal space, 108, 112
 - first countable, 113
- compact ordered space, 227
- compact right topological semigroup, 30
- compact space, 106–108, 110–114, 118, 201, 205, 318, 331
 - linearly ordered, 108, 112, 113
 - metric, 108, 197, 311, 316, 329
- compact subsemigroup, 32, 35, 36, 40
- compact topological group, 107–109
- compact valuation, 311, 312
- compact zero-dimensional Hausdorff space, 124, 214
- compactification, 460, 461

compactification— *continued*

- Bohr, 165, 457, 459–461, 463
- metrizable, 118
- one-point, 112, 328
- Stone-Cech, 130, 317
- compactly branching, 69–73, 75–77, 79–81, 83–85
- compact-open topology, 108, 116, 117
- complete lattice, 244, 245, 293
- complete metric space, 11–14, 18–21, 26
- completeness, 231, 232, 234, 235
- complexity, 348, 349, 354, 355, 357, 359
- compression (of filter of filters), 465, 470
 - filter, 471
 - ultrafilter, 472
- concurrency, 11, 26
- condition of iterated limits, 393, 405–408
- connectedness, 265–268, 276
- constructible set, 1, 2, 5, 6, 8, 9
- continuum, 413, 417, 418, 425
- convergence S -net space, 395–411
- countable
 - base, 123
 - crowded irresolvable space, 42
 - Hausdorff ring topology, 378
 - neighborhood, 330
 - open base, 455
 - space, crowded, 46
- covering dimension, 438, 441

D

- developable space, 169, 170, 172
- diagonal net, 465, 470, 471
- diagonality axiom, 393, 400
- digital topology, 413, 414, 444, 445
- direct system, 364–368, 370, 374, 376
- direct topology, 364, 367, 369, 371, 372, 377
- directed partial order, 348
- disconnectedness 265–277
- discrete ring, 364, 372
 - maximal, 376
 - non-, 370
- domain, 304, 305, 312–314
- dual continuity, 333, 336, 337, 339
- dual neighborhood continuity, 335
- dynamical system, 316

E

- ϵ -ball topology, 49, 50, 55, 58, 62, 63, 67
- Euclidean, 414, 438
 - d -space, 438
 - geometry, 421
 - k -metric, 151
 - metric, 71, 73, 75, 76, 83, 85, 141, 442
 - topology, 420
- exactly n -irresolvable space, 42
- exponential κ -uniformities, 140
- exponential uniformity, 149, 150, 161

F

- \overline{FC} group, 454–456, 458
- filter convergence, 465, 466, 469–471
- finite product, 28, 29, 32, 38
- finitely branching, 69
- fixed point, 142, 155–157, 238, 245, 252, 254, 255
- fixed point proof principle, unique, 69, 74, 80, 81, 84

G

- generalized metric, 49–51
- group, 121, 330, 368–70, 372, 378, 379
 - Abelian, 123, 127, 164, 364, 365, 369
 - compact, 107–109, 166, 454, 456, 458, 462, 464
 - Hausdorff topological, 121
 - locally compact Abelian (LCA) 458–460
 - locally connected, 455
 - locally quasiconvex, 167
 - maximally almost periodic, 164, 165, 167
 - vector, 455, 456
- group topology, 121, 125, 364–367, 380
 - totally bounded, 127
- g -space, 382, 390, 391

H

- Hausdorff topology, 414
- hyperuniverses, 140–143, 148, 149, 154, 155, 157–159

I

ideals, 279, 280, 283, 285, 287, 289, 292
 idempotent, 28–33, 36, 39, 40
 integer lattice, 438, 439
 integration, 174, 176, 194–199
 IP^* sets, 28, 29, 31, 32, 37, 38
 irrationals, 316, 317, 319
 irresolvable space, 42–46

J

join semilattice, 348–350, 357, 359–361

K

κ -Tychonoff, 150
 Krull dimension, 444–448, 450, 451

L

labelled transition system, 69, 70, 73, 79, 85
 metric, 70, 72, 74, 75–77, 81–86
 nonexpansive metric, 77, 79, 80
 lattice, 438
 cube, 440
 of closed sets, 444, 446, 451
 proximity, 214–228
 limit S -net space, 393–410
 Lindelöf
 nonseparable space, 111
 space, 457
 linear structure, 413, 420, 424, 425
 locally closed set, 1, 2, 5–8
 locally compact, 378, 379
 group, 460
 locally finite space, 444

M

MAP group, 454, 455, 458
 locally compact, 455, 457, 458
 locally compact, Hausdorff 457
 maximal clopen filter, 201, 202, 205
 McAuley's bow tie space, 433, 436
 metric, 49, 51, 56, 73, 304–306, 308, 312, 313, 320, 326
 generalized, 49–51
 partial, 304–306, 308–311, 314
 metric labelled transition system, 69–71
 metric limits, 65

metric semantics for programming languages, 140
 metric space, 12, 50, 55, 58, 62, 63, 67, 70, 72, 74, 75, 77, 81, 83, 86, 317, 319, 320, 326, 327, 433, 438, 441
 complete, 69, 70
 metrizable, 148, 208, 209, 211, 212
 factorization of, 209
 metrizable, 106–111, 115, 117–119, 167, 171, 316, 317, 319, 321, 382, 387–391, 425, 431, 461
 metrizable dyadic space, non-, 109
 metrizable group, MAP, 167
 metrizable space, 116, 433
 compact boundary-, 111
 completely, 117
 metrization, 207
 minimal neighborhood, 444, 446
 minimal T -space, 293
 monotone paracompactness, 433–436
 monotonically normal, 106–108, 112–115, 118

N

Nagata
 first countable, 209
 neighborhood, 390, 391
 Nagata space, 209, 382, 390, 391
 double sequence theorem of, 207–209, 211
 Nagata-Smirnov metrization theorem, 116
 n -cube, 438
 neighborhood, 145, 147, 166, 167, 207–209, 211, 212, 316, 317, 327, 328, 333, 383, 384, 386, 388, 390, 457, 463, 465, 474
 clopen, 159
 compact, 224, 458
 continuity, 333, 335
 countable, 330
 finite, 444
 minimal, 444, 446
 minimal open, 450
 Nagata, 390, 391
 open, 146, 147
 open disjoint, 204
 quasiproximity, 344, 345

neighborhood — *continued*

symmetric, 463

Urysohn collection 344

zero-set, 205

neighborhood filter, 205, 468

neighborhood lattice, 333

dual, 333, 337

neighborhood structure, 393

net convergence, 465, 468, 469

 n -irresolvable space, 43

nonexpansive, 51, 52, 53, 59, 66

function, 52, 58, 66

function space, 52

non-well-founded set theory, 238, 239

non-well-founded set, 140, 141, 159

Ooperational and denotational semantics,
11, 12operational semantics, 69, 73–75, 77, 79,
81–85

compact, 76, 79, 80

P

paracompact, 107, 110, 114

partially ordered set, 444, 450

preclosure space, 393, 402, 408

precompact, 127

group topology, 121, 127, 128

preneighborhood Urysohn collection, 333,
344

preorder, 49–52, 54–56, 58, 60, 62–64

prime filter, 444, 446, 448, 449, 451, 452

product spaces, 28

proto-metrizable, 433–436

proximity lattice, 214, 217–221

strong 214, 216, 222–229

pseudo-topological space, 393

Q

quasimetric, 382–384, 388, 389

quasiproximity, 333, 344

quasi-pseudo-metrics, 349, 350, 362

weightable, 348

quasi-uniformity of compact convergence,
235quasi-uniformity of quasi-uniform conver-
gence, 231, 233–236**R** R_0 -space, 393, 408, 410

Raikov completion, 164, 165

recurrence, 316–318, 329

regular morphism, 265, 274, 275, 277

resolution, 106, 108, 114, 115, 119

SScott topology 49, 50, 51, 58–60, 62–67,
174–187, 293, 301, 304

Scott-domain, 312

 S -net, 393–409

space, 393–410

space, convergence, 393–410

semantics transformation, 69, 81–84

semigroup of continuous selfmaps, 279,
283

semimetric, 382, 389

set-Mal'tsev operator, 106, 108, 109

sets of continuity points, 169

shallow MN operator, 106, 113, 114, 118 σ -discrete covering, 438soberification, 174, 176, 179, 180, 187–
189, 193

sparse, 130, 133, 135–137

specialization order, 293, 301

 \star -shape category, 88–90, 97, 100–103 \star -shape theory, 88, 89

Stone duality, 214, 217, 225, 227

Stone-Cech compactification, 28, 30, 316

stratifiable, 106, 108, 115–119

group, 119

space, 108, 116, 117, 119

symmetric, 33, 207–213, 382–390

T T_0 -space, 393, 408, 411, 444–448, 450,
451 T_1 -space, 393, 408, 411
